aiNET

Full-Stack Software Developer (100%, Freelancer)

About aiNET GmbH

aiNET is an ETH spin-off based in Basel. We provide immuno-informatics services to pharmaceutical and biotech companies using artificial intelligence to *help discover antibodies in one click.*

Role purpose

Newly established from a small team of scientists, we are looking to hire a full-stack software developer to develop further immuneS, software for biological sequences (string) analyses. We offer competing compensation and interesting employee participation schemes.

The full-stack software developer will be mainly responsible for back-end development of the software. Flexibility and independency to bring modifications to the front-end design of a web application is required.

Major Accountabilities

- Develop and improve back-end (C#/C++, Python/R, Databases)
- Modifications to front-end design (Javascript)
- Software testing and deployment

Minimum Requirements

- Master in Computer Sciences (ETHZ), PhD or experience
- Working experience with industry standards of software deployment
- Knowledge in machine learning and life sciences is beneficial
- Trustworthy, independent and efficient
